

SUMMER INTERNSHIP REPORT
ON
“Power BI Implementation and Data Analysis for
SRF Limited”

GURU GOBIND SINGH INDRAPRASTHA
UNIVERSITY, DWARKA, DELHI – 110078

UNIVERSITY SCHOOL OF MANAGEMENT STUDIES

SUBJECT CODE: MBA (A) 152
(2024-2026)

Submitted To:
Dr. Praveen Kumar
(Assistant Professor)

Submitted By:
Tanya Mathpal
01016619824
MBA (Analytics)

CERTIFICATE

This is to certify that Ms. Tanya Mathpal registered in the MBA(Analytics) programme of USMS, GGSIPU is permitted to carry out the proposed work presented in this Summer Internship Project Report under my guidance. The matter embodied in this proposal has not been submitted earlier.

Date:

Signature

(Dr. Praveen Kumar)

INTERNSHIP CERTIFICATE

11th September 2025

To Whomsoever It May Concern

This is to certify that **Ms Tanya Mathpal** has been engaged with us as Trainee during the period from **1st July 2025 to 31st Aug 2025** at our corporate office Gurgaon. She has successfully completed her project on **"Power BI Implementation and Data Analytics"** in IT Department under the guidance of **Ms Kanchana Raghuram- Manager- BIT**.

During the period of her training, we found her to be sincere and hardworking.

We wish her all the very best in his future endeavours.

For SRF Limited

FCB & SCB

A handwritten signature in black ink, appearing to read "Sumeet Jindal".

Sumeet Jindal

SRF - General Financial Unit - This mail document is for general internal use in SRF & SRF Restricted

DECLARATION

I hereby declare that matter embodied in this Summer Internship Report entitled “**Power BI Implementation and Data Analysis for SRF Limited**” submitted to USMS, GGSIPU is a record of original work done by me, under the guidance and supervision of Dr. Praveen Kumar and it has not formed the basis for the award of any Degree/Diploma/Associateship/ Fellowship or other similar title to any candidate of any University.

Tanya Mathpal

01016619824

ACKNOWLEDGEMENT

I would like to express my sincere gratitude and appreciation to all the individuals who have supported and guided me throughout my internship period and during the completion of this research report.

First and foremost, I would like to extend my deepest gratitude to my faculty guide, Dr. Praveen Kumar of University School of Management Studies, GGSIPU Dwarka, for his exceptional mentorship and unwavering support throughout this project. His valuable insights, patient guidance, and expert supervision were instrumental in shaping this research work and helping me navigate through the challenges encountered during the study.

I am also profoundly grateful to SRF Limited for providing me with this invaluable internship opportunity. My sincere appreciation goes to my industry mentors and colleagues at SRF who generously shared their knowledge and practical experience. I would also like to acknowledge the support of my institution, University School of Management Studies, GGSIPU Dwarka, for providing the academic foundation and resources that made this research possible.

Lastly, I wish to express my heartfelt thanks to my family and friends for their constant encouragement, understanding, and moral support throughout this Project.

CHAPTER 1

INTRODUCTION

The deployment of a business intelligence solution using Power BI at SRF Limited is the main topic of this summer internship report. The creation of dashboards to give clients a high-level financial picture was the project's main objective.

In order to extract company data, the study describes how to link Power BI to an Oracle database. It explains how to load data, including how to import a particular section of a table using a direct query. Additionally, Power Query was used for data transformation and cleaning, including altering the data type of the date column and eliminating superfluous characters and whitespace. To guarantee data integrity, relationships between several tables were created in the model view.

The development of a "Customer Ledger" dashboard was one of the project's main outputs. This dashboard shows a customer's opening balance, debit, credit, and closing balance, giving them a fast financial check. The usage of different Power BI features for formatting and visualization, such applying visual borders and shadows, switching display units, and adding slicers for filtering, is also highlighted in the report.

Additionally, the project file shows how dynamic Row-Level Security (RLS) is implemented using DAX to limit party-wise data access. The Power BI Service, a platform for viewing, sharing, and collaboration, received the final dashboards and report.

PROFILE OF THE ORGANISATION

SRF LIMITED

SRF has developed from a single tire cord producer to a prominent, well run, diverse chemicals conglomerate since its foundation in 1970 and the opening of its first factory in Manali, close to Chennai, India, in 1974.

Their capacity for diversification is their main advantage. Their strength comes from more than simply their prior accomplishments; they continue to use it to become leaders in the world today.

They sell their extensive line of goods and services all over the world. Tires, air conditioners, mines, cricket grounds, automobiles, home appliances, food packaging, and pharmaceutical raw materials are just a few of the many industries and applications for these. They aim to offer the best sustainable, industrial, and specialty intermediates that improve people's quality of life through their varied portfolio.

Their motto—"They always find a better way"—is embodied not only in the goods they produce and the superior procedures they use, but also in their proclivity for innovation, technological leadership, employee engagement, professional management, open governance, and inclusive growth.

There are constantly new concepts to investigate. Regardless of how excellent things are, they can always be improved. They will take advantage of any chance to add more value as they pursue their desire for constant development. They have their current headquarter situated in Gurugram

Business Verticals of SRF:

1) Fluorochemicals Business:

SRF's Fluorochemicals Business (FCB), which was established in 1989, sells industrial chemicals, pharmaceutical propellants, and refrigerants to fund its operations. The sole company in India producing ozone-friendly refrigerants like F 134a and F 32 is SRF.

2) Specialty Chemicals Business:

Partnering with Global Crop Protection Companies. Our Specialty Chemicals Business, which has over 30 years of experience in Halogen chemistry, is renowned for its ability to develop and produce sophisticated intermediates for use in pharmaceutical and agrochemical applications.

3) Performance Films & Foil Business:

Their packaging films safeguard dry snacks from becoming contaminated and wet. Their product serves as one of the layers of packaging that protects against light, moisture, and air while also assisting in maintaining the scent.

4) Technical Textiles Business

“We don’t manufacture materials that are seen. We ensure their strength from behind the scene!”

For a variety of non-consumer and lifestyle applications, SRF provides high-performance reinforcements for yarns and textiles made of polyester and nylon. In addition to being India's biggest producer of technical textiles, the company leads the world market for the majority of its goods. Industrial yarn, belting fabrics, and tire cord fabrics are all included in SRF's technical textiles product basket.

5) Coated Fabrics Business:

“We don’t play games. We ensure uninterrupted play!”

In addition to being UV stabilized, their coated fabrics are resistant to abrasion, tears, and fire. These are waterproof and simple to make, install, and maintain since they are made of high tenacity polyester yarn with a special PVC formulation.

6) Laminated Fabrics Business:

Provide the printing, advertising, and signage industries with high-quality solutions. Their laminated products are sold in the market under the following brand names:

- SRF Victory and SRF Arjun: For the low gsm Front Lit flex
- SRF HI-GLOSS: For the Hot Laminated Front Lit and Back Lit flex
- SRF FLEXI KAWACH: Hot Lamination Protective Covers
- SRF FABGLOW: For the Cold Laminated Front Lit & Back Lit flex resistant.

OBJECTIVE

- To develop dashboards that provide clients with a comprehensive financial overview and a high-level financial picture.
- The creation of a dynamic "Customer Ledger" dashboard that offers a quick financial check by displaying a customer's opening balance, debit, credit, and closing balance
- To develop interactive dashboards that simplify complex data and assist in uncovering hidden insights that support well-informed decision-making.
- To carry out the full BI workflow, which includes establishing relationships between tables, utilizing Power Query for data transformation and cleaning, connecting Power BI to an Oracle database to extract company data, and implementing sophisticated features like dynamic Row-Level Security (RLS) using DAX to restrict party-wise data access.

CHAPTER 3

RESEARCH METHODOLOGY

This project uses a quantitative research technique to examine financial state of clients using PowerBI business intelligence tools.

The purpose of this little project is to create interactive dashboards that makes complex data easy to understand and help derive hidden insights which help in making informed decision making.

SOURCE CODE

The data utilized in this research was obtained from SRF Limited and is confidential and hence all the data related information has been blurred. This dataset contains information about ledger details, transactions of clients. The variables include Document type, Document number, Document date, Currency, Debit, Credit. To prepare the data for study, it was visualised, cleaned and retrieved using PowerBI

Visualisation

- **Data loading: Transferring data into PowerBI Via SQL server, Oracle, Excel or**
- **There are the three icons on the left corner.**

First is 'Report View' which is our Canvas

Second is 'Data View' which shows our data tables

Third is 'Model view' which shows the relationship between the tables

Fourth is 'Dax Query View'

- **Cross Filtration: Filtering across graph**

PowerBI allows cross filtration across graph. We can choose one particular Value from a Dimension and all the other graphs will filter according to that.

- **Visualization and Formatting: Forming graphs and tables to draw meaningful conclusion**

You can select a graph from 'Build visual' in the Visualization panel and drag values from the data panel and drop in the graph

- **Conditional Formatting: To put up a condition on a colour, font or other formatting**

We can do it either by right clicking on the column value > conditional formatting

- **Slicer: It is used to obtain specific filtered result Throughout the Canvas**

Example: filtering out data from 2023-2024

Click on slicer> drag the dimension on the basis on which you want to filter

Now, set it accordingly.

You can also put a filter for countries, departments, products, salesperson etc.

- **Pitchfork: In a line chart we can use Pitchfork to go down the date Hierarchy, i.e., from year to quarters to months**

- **Putting a Filter on the entire Page through the Filter PANE**

Drag and drop the column in the “add data fields here” Box and select the values against which you want to filter

- **Row-Level Security (RLS)**

By defining filters within roles, you can make sure that users only view the information that is pertinent to them. Static RLS and dynamic RLS are the two primary approaches to RLS implementation.

Data is subjected to fixed filters via static RLS.

User-specific information/ attributes, including email addresses or usernames, is used by dynamic RLS.

DAX: stands for Data Analysis Expressions

It is a formula language used to create Measures (🧮) in PowerBI. It is used for calculation

We create a Measure by clicking on Home tab> New Measure

- DAX using **SUM**

SUM () is an aggregation function in DAX. It calculates the sum of all numbers in a column. **shipments[Amount]** refers to a specific column in your data model

- DAX using **DIVIDE**

DIVIDE() is a DAX function that performs division. It's preferred over the simple division operator (/) because it handles division by zero, returning **BLANK()** instead of an error.

- DAX using **CALCULATE**

CALCULATE allows you to change the filter context for an *expression*. It evaluates an expression (the first argument) under a modified filter argument (defined by subsequent arguments).

- DAX using **IF**

IF (): This is a logical DAX function that evaluates a condition and returns one value if the condition is true, and another value if the condition is false

- DAX using **COUNTROWS**

COUNTROWS () is a DAX function that counts the number of rows in a given table.

- DAX using **Distinctcount**

DISTINCTCOUNT () is a DAX function that counts the number of distinct (unique) values in a column.

- DAX using **IN**

IN is a logical operator in DAX. It's used to check if a value in a column is present within a specified list of values. It's essentially a shorthand for multiple OR (||) conditions.

- DAX using **VAR**

VAR: It is used to make two or more distinct calculations and then use the keyword 'return' to define a specific result.

- **CREATING NEW COLUMN USING DAX**

We can create new columns in Power BI using DAX. To create a column in a particular table: Right click on the table> New Column

Is indicated by () in the Data panel

Power Queries

To open the 'Transform Data' window:

Go to Home Tab> Click on Transform Data. A separate window will be opened

- **Data Trimming: Removing space in the beginning and end**

Home tab> Transform data> right click on the column> trim

- **Replace: To replace the a column value with another**

Right click on the column and select replace.

- **Replacing with Mode: Replacing the missing value with the most frequent value**

To identify Mode: View tab> select column profile

- **Changing Datatype**

Click on the datatype Icon on a column to change its data type , Or you can also right click on a column> select change type

- **Use first Row as Header: In case the headers are names as Column1, column 2....**

To remove this, go to Home> use First row as header

- **Adding a new column from an existing using a condition**

Go to add column> conditional column

- **Splitting Column: separate elements of a column into multiple column**

Transform> Split column

Choose the Parameter according to which you want to split the column, a window will appear
Set the parameters then click OKAY.

- **Deleting Rows**

Home> Remove Rows

CHAPTER 4

DATA ANALYSIS

Data Loading from Oracle into PowerBI

Click on Get data on the Home Ribbon> click on More

Type Oracle in the search bar and click on 'Connect'

Write your Server name

Click on Advance optiond write your Direct Query for importing a part of the table and then click on 'ok'

Your Data will get loaded

Forming Relationships (Mapping):

Go to Model View> right click on any table> Manage Relationships

Select the common tables then click on Save

From table

CustomerMaster

ACCOUNT_N...	ACCOUNT_N...	CUST_ACCT_S...	CUSTOMER_ID	CUSTOMER_S...	PARTY_ID	PARTY_NA
CBB-FC	3615	4579	3655	CBB-FC-BABA...	8505	BABAJEE
CBB-FC	1511	1743	1551	CBB-FC-CHA...	8925	CHAWLA
CBB-FC	1511	91017	1551	CBB-FC-CHA...	8925	CHAWLA

To table

CHAPTER 6

CONCLUSION

The creation and implementation of a business intelligence solution based on Power BI marked the successful conclusion of the summer internship at SRF Limited. By creating a dynamic "Customer Ledger" dashboard, the main goal of giving clients a high-level financial overview was accomplished.

This project covered all aspect of the business intelligence workflow, making it a thorough learning experience. Connecting to the business's Oracle database was the first step, and then Power Query was used for necessary data transformation and cleansing. For the final visualizations to be accurate and reliable, the data modelling and relationship-building processes were essential. The technical skills acquired in Power BI were further enhanced by implementing advanced features like dynamic Row-Level Security (RLS) using DAX, which is vital for data privacy and security in a corporate environment.

By publishing the report to the Power BI Service, the project finally moved from a development phase to a deployment phase. This last phase showed that it was possible to develop a secure, professional, and shareable analytical tool that could offer stakeholders insightful information based on data. This paper demonstrates how business intelligence principles may be applied in real-world scenarios and how these solutions can improve a company's decision-making process.

LIMITATIONS

While the report does not have a dedicated "Limitations" chapter, several scope and data constraints can be identified.

- **Scope Limitation :** The project had a concentrated focus. Although other enterprise-level Power BI features like making paginated reports, creating an app, and extracting data were explored, the main focus of this project was solely on developing and safeguarding interactive dashboards.
- **Data Constraint:** The data used for the analysis, which was obtained from SRF Limited, is confidential. Due to this, all data-related information and snippets shown in the report's documentation have been blurred.
- **Research Methodology:** The project utilized a quantitative research technique to examine the financial state of clients. This suggests the analysis was confined to numerical financial figures and may not have incorporated qualitative data, such as feedback on the dashboard's usability or client satisfaction.
- **Time and Resource Restrictions:** The project was limited to the summer internship period. Due to the time constraint, the Customer Ledger dashboard's development and security were the main priorities. Although they were investigated, other corporate capabilities (such as developing apps, paginated reports, and thorough data extraction) were not developed or refined to the same extent as the main dashboard.

CHAPTER 6: Learnings

From desktop application to the collaborative features of the Power BI Service, this project offered a thorough introduction to Power BI's capabilities. I was able to combine a number of essential features, beginning with Power Query for reliable data cleaning and processing. Creating intricate linkages between tables and utilizing DAX to enhance these models with sophisticated computations taught me how to model complex datasets.

By leveraging slicers, conditional formatting, and cross-filtering to create dashboards that are not only aesthetically pleasing but also interactive and instructive, the project also showed a thorough mastery of Power BI's visualization engine. This study also **explored the Power BI Service's enterprise-level features**, where I learned how to manage workspaces, generate reports, and implement Row-Level Security (RLS) to protect data privacy. Though other features like making paginated reports, creation of app, extracting data **were explored**, the main focus of this project was developing and safeguarding interactive dashboards.

In conclusion, our internship project served as a thorough and hands-on business intelligence education. In addition to learning how to utilize Power BI as a tool, I now have a solid understanding of the whole data lifecycle, from raw data to safe, public, and informative dashboards. My future work in data analytics will benefit greatly from the immediately applicable skills I've gained in data modeling, analysis, and security.
